

MIRROR: BALANCIN

Design by
François Azambourg

Description

Born out of the designer's reflections on bases, the Balancin mirror is a sheet of folded stainless steel which makes reference to the playground swing and to the best-loved childhood toys. We leave behind the conformist codes of the mirror, located in one place and stable. This is not only a decorative, representative object but also an amusing one. An attractive, functional piece which requires true expertise and precision in its production. A discreet object yet with a strong presence and difficult to forget.

Swinging mirror, a simple sheet of brilliant-polished, folded sheet stainless steel. Grey lacquered MDF protector strips on the bottom.
