

BIPLAN

Design by

Atelier BL 119- Blain & Dixneuf

Description

Biplan is a small wooden occasional shelf. Its minimal depth enables it to accommodate books and collections of objects. Inspired by the metal structures of industrial buildings, the uprights with their triangular wooden profiles suggest a play on construction and interconnection. Light and elegant, the shelf with its two suspended surfaces seems to float in mid air.

Wall shelf with structure in natural varnished solid American walnut and shelves in satin-finish silk grey lacquered MDF.
