

ROPE

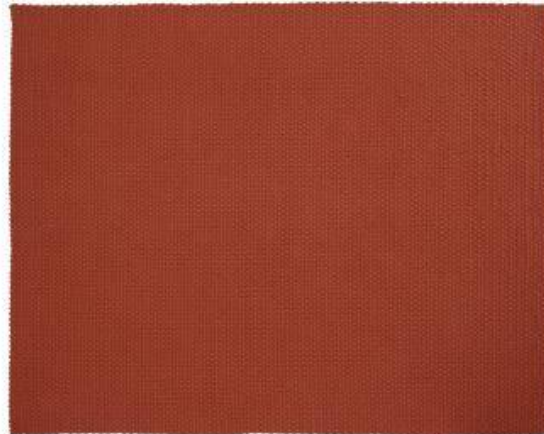

Design by

Description

An INDOOR/OUTDOOR rug, impervious to humidity thanks to the materials from which the cord is woven : PET (polyethylene terephthalate which, despite the similarity in name, is in no way similar to polyethylene and contains no phthalate, an element which has been recently linked to toxicity) and polyester. The PET used in the production of this rug originates from recycling (17kg of PET represents the equivalent of 370 recycled plastic bottles). Its colours are inspired by natural outdoor elements. The Rope rug is particularly resistant to wear.

Rug in woven recycled PET cord with internal core in non-woven polyester.

Dimensions to choice. Max. 250 x 300 cm.
